MOMENTUM

A medium-large bean suitable for fresh and processing markets.

Momentum is a widely adaptable, dwarf type bean of medium to tall height and is ideal for open field production.

This variety is vigorous and has a high heat tolerance making it suitable for use in stressful conditions.

Coupled with its concentrated setting, thereby ensuring it's suitable for growers seeking earliness and high yield.

DISEASE RESISTANCE

HR: BCMV

PALATI

Medium - fine to large segment.

Palati is a medium dark - green bobby bean suitable for fresh market and processing. The pods are 14 - 16 cm long, straight and fleshy.

Approximately 90% have a diameter greater than 9 mm.

Palati has a strong upright and open plant habit with an excellent yield potential. Pods are easy to pick.

DISEASE RESISTANCE

Hr: Bean Common Mosaic Virus (BCMV)

IR: Halo Blight (Psp 1-2), Rust (Ua)

CHAMPION

A medium-early hybrid of the Nantes type.

Champion is a medium-early hybrid of the Nantes type for the fresh and pre-pack market planted in late summer, autumn and winter.

Champion is a very uniform, slender and cylindrical carrot up to 24 cm long with a blunt rounded end. The smooth skin is orange as is the internal and external colour. The core is small sized.

Champion has a relatively good field standing ability and can be harvested mechanically. Optimum results at maturity when Champion showed blunt rounded ends to the end of harvest.

DISEASE RESISTANCE

IR: Ad

BANKO

An intermediate day onion for production in open fields.

Banko is a late intermediate day onion with very uniform round-shaped bulbs. Strong brown-skinned colour with a very high yield potential.

Very firm bulbs with good storage ability. Tight bulb outer scales.

DISEASE RESISTANCE

Good General Foliar Disease Resistance

Disclaimer: Syngenta Seeds Vegetables has exercised reasonable care and skill in compiling this brochure. All data in this brochure are intended for general guidance only and the user should apply it in accordance with his own knowledge and experience of local conditions. In case of doubt we recommend that a small scale trial production be carried out to determine how local conditions may affect the variety. Syngenta Seeds Vegetables cannot accept any liability in connection with this brochure.
Syngenta Club Root disclaimer : The Syngenta resistance against Club Root is effective against the predominant races Pb:0 and Pb:1 and against the less frequent race Pb:3 but not against the infrequent race Pb:2 that may occur in some fields. Genetic resistance is only one of the tools to manage Club Root. Culture measures such as liming, use of fertilizers with high percentage of calcium, proper drainage, good crop hygiene management are several of important components of an integrated approach to manage the disease. We always recommend to first execute small variety trials before starting commercial production of a new variety.

All unauthorised copying is prohibited.

BATORY

A medium maturing broccoli suitable for the fresh and processing market. The variety has high vigour and forms big heads suitable for processing. Batory has a high yield potential with an excellent floret recovery rate.

MONCLANO

A hybrid Broccoli variety with Clubroot resistance.

Monclano is a vigorous growing variety with firm head quality. Monclano is ideal for processing but can also be used for fresh markets. The plants have good vigour and the variety is known for its high field holding capacity and high yield potential. Recommended plant density is 3 - 4 plants / m².

MONOPOLY

A medium early hybrid for production in autumn and winter. Monopoly is a hybrid of medium vigour for fresh market and processing. The plants are very uniform, have good vigour and produce dark-green, dome-shaped heads of high quality. Monopoly can be sown in late summer and autumn for harvest in late autumn, winter and early spring. Recommended plant density is 3-4 plants / m². Together with Montop it makes for year-round, top quality production.

MONRELLO

A late hybrid for production in autumn and winter. Monrello is a hybrid of strong vigour for fresh market and processing. The plants are very uniform, long leaf stems, have good vigour and produce compact, dark grey-green to slightly bluish-green, dome-shaped heads of high quality. Monrello can be sown in late summer and autumn for harvest in late autumn, winter and early spring. Recommended plant density is 3 - 4 plants / m².

MONTOP

A medium early hybrid for production in summer and autumn. Montop is a vigorous hybrid for fresh market and processing. The plants are very uniform, have a good vigour and produce dark green, dome-shaped heads of high quality, ideal for punnets. Montop can be sown in spring and early summer for harvest in late summer and autumn. Recommended plant density is 3-4 plants / m².

FABIOLA

An early type cabbage ideal for the fresh market segment. Fabiola produces medium sized round cabbage heads suited to supermarkets and is grown in the open fields. The variety is suited to tropical and subtropical regions, has high vigour and matures early. It has good field standing ability and large heads. The variety is also known for its consistent high yields.

DISEASE RESISTANCE

HR: Froc: 1

INTELLO

A large framed cabbage suitable for the fresh and hawker market.

Intello produces medium to large cabbage heads and is suited to open field production. The variety is vigorous and produces highly uniform medium to large heads.

The heads have a medium dark green colour and are slightly elliptical ensuring its suitability for the fresh and hawker market.

Intello has high bolting tolerance and a good field standing ability. Compared to other varieties, some field tolerance towards Black Rot has been observed.

KLABISHI

Medium-late white cabbage hybrid for the fresh market and hawker use. Klabishi is a vigorous, large framed, medium-late hybrid with a long growing cycle. Very attractive dark green head and dark green bluish leaf colour. Ideal for the hawker market.

Compact circular to semi-globe head shape with a short core. Good standing ability in the field and strong against cracking. Excellent heat tolerance. Suited for harvesting of large heavy heads and also small-medium heads (higher plant population).

Winter plantings should be harvested by early August for best returns. Compared to other varieties, some field tolerance towards Black Rot has been observed.

NOVOTON

Medium-late white cabbage hybrid for the fresh market and hawker use. Novoton is a vigorous, large framed, medium-late hybrid with a long growing cycle. Upright plant with a large grey-green frame and leaf colour.

Medium-coarse fineness of leaf layers. Very large, uniform filled, circular to semi-circular heads with a medium-short core. High bolting tolerance and strong against internal disorder. Long harvest window.

DISEASE RESISTANCE

IR: Foc: 1

REBALL

Medium-early red cabbage hybrid for the fresh market. Reball (CMS) is a vigorous, strong plant with a compact growing habit. Uniform, round to slightly high round, medium-sized heads with a short core.

Strong waxy layer. Good internal colour, quality and ideal for pre-packing. Good field holding ability. Can be harvested as a red baby cabbage, depending on size requirements.

CLARIFY

A medium cycle variety with Clubroot resistance.

Clarify is a hybrid variety that is suited for areas with Clubroot problems but also good in other conditions.

The variety produces big heads and boasts high field standing ability.

Clarify is suitable for fresh markets.

DEPURPLE

A purple coloured cauliflower suitable for the fresh and specialty processing market.

Depurple is moderately vigorous and suited to open field production.

The variety has normal vigour and this allows for the development of good quality curds with consistent colour and a high percentage of harvestable heads.

Depurple is also known for its reliability in supply and high yield potential.

FLAME STAR

A medium-early hybrid for production in spring.

Flame Star is a semi-orange variety that provides high yield.

The variety is suitable for autumn, winter and spring harvest.

Vigorous, medium-early hybrid with a short growing cycle.

The medium plant depicts high vigour and good field standing ability.

Flame Star is suitable for fresh market and processing.

KORLANU

A medium-early hybrid for production throughout the year.

Korlanu is a vigorous, medium-early hybrid with a medium-long growing cycle.

The vigorous plant has very good cover leaves with a good twist in the top which provide excellent curd self-protection. The leaves are dark green.

The plants produce high-quality, flat-round curds with nice tight florets.

Curds are deeply situated in the plant for optimum protection.

PLANNER

An early hybrid for production in the summer and autumn.

Planner is a vigorous, early hybrid with a medium-short growing cycle.

The leaves are medium-green. The plants produce highquality, well-transverse elliptical curds with nice tight florets.

Planner is suitable for fresh market.

SPACESTAR

A medium-early hybrid for production in late summer to winter and autumn.

Spacestar is a vigorous, medium-early hybrid with a short growing cycle.

The vigorous plant has good curd protection surrounded by medium erect outer leaves. The leaves are medium green.

The plants produce high-quality, flat-round curds with nice tight florets.

The curds sit deep in the plant and are very firm, heavy and well-protected by the inner leaves.

Spacestar is suitable for both fresh market and processing.

SPACESTAR GOLD

A medium-early hybrid for production in early summer and autumn.

Can successfully be used in winter months too. Spacestar Gold is a vigorous, medium-early hybrid with a short growing cycle.

The vigorous plant has a good curd protection surrounded by medium erect outer leaves. The leaves are medium green.

The plants produce high-quality, flat-round curds with nice tight florets. The curds sit deep in the plant and are very firm, heavy and well- protected by the inner leaves.

Spacestar Gold is suitable for both fresh market and processing.

Recommended plant density is 3.5-4 plants / m².

BOMBER

Bomber is a long cucumber for active and passive greenhouses. It is a strong, vigorous variety with a good disease package, especially powdery mildew. Fruit are long, uniform and of high quality. Bomber is an early hybrid with long fruits, ideally suited for active greenhouses or under plastic in warm months. Medium strong plant with high yield. The fruits have an attractive dark-green colour. They are regular and unique shaped fruit with smooth neck and slightly ribbed. Bomber is primarily grown in the summer.

DISEASE RESISTANCE

HR: Cca / Ccu / Px / CVYV

IR: Gc / CMV / CYSDV

IMANOL

A 100% female parthenocarpic hybrid. Imanol is a medium-early hybrid with long fruits, suitable for cultivation under glass or plastic. The rather vigorous plant remains open and easy to work in, promoting air flow.

The fruits have a bright-green colour, good shape, slightly ribbed and are 30-35 cm long in winter.

Imanol is a high-yielding plant even under relatively cold conditions.

DISEASE RESISTANCE

HR: Cca / Ccu

IR: Gc / Px

CARNIVOR (Melon & Watermelon Rootstock)

Carnivor is a vigorously growing interspecific rootstock with a very high cold tolerance. This easy to graft rootstock has a good affinity and can be used on melon, however with a specialty on watermelon.

Great fruit setting ability while promoting fruit weight at the same time.

DISEASE RESISTANCE

HR: Co: 1 / Fon: 1, 2 / Fom: 0, 1, 1-2, 2

IR: Fon: 0

STRONG TOSA (Watermelon, Melon & Cucumber Rootstock)

Strong Tosa is the new F1 rootstock for cucumber, watermelon and melon grafting. C. maxima x C. moschata intraspecific hybrid. Holds an excellent vigour and is very tolerant to low temperatures. It is well adapted to conditions that require high vigour (e.g. sandy soils). Fairly good tolerance to "sudden wilt". It is easily grafted with all techniques nowadays used. Strong Tosa offers high germination and very uniform plants. Strong Tosa visibly increases the fruit dimensions (+ 10 - 20 %).

DISEASE RESISTANCE

HR: Co: 1 / Fon: 1, 2 / Fom: 0, 1, 1-2, 2

IR: Fon: 0, 2

ICE WAVE

A large iceberg lettuce that is suitable for the fresh and processing market.

The variety is suitable for the summer period and produces suitably sized green coloured heads.

DISEASE RESISTANCE

HR: Bl: 16-35EU / Nr: 0 / TBSV

ICE VIC

A large iceberg lettuce that stands out for its basal training, closure and precocity.

It is suitable for the fresh and processing market.

DISEASE RESISTANCE

HR: Bl: 16, 18-24, 27, 28, 30-32 /
Fol: 1, 2

WAIKIKI

A large iceberg lettuce that is suitable for the fresh and processing market.

The variety is also known for earliness, high plant vigour and suitable head size. Waikiki depicts good shape and plant vigour, excellent basal closure and uniformity.

Waikiki has a good resistance package and tolerance to bolting and internal burn.

DISEASE RESISTANCE

HR: Bl: 16, 18-24, 27, 28, 30-32 /
Fol: 1, 2

CELESTIAL

A large cos type lettuce with good Bremia resistance.

The variety has improved shape and twisting tolerance and is suited to the fresh and processing market.

The variety is also known for earliness, high plant vigour and medium dark colour intensity.

DISEASE RESISTANCE

HR: Bl: 16, 18-24, 27, 28, 30-32 /
Fol: 1, 2

EXTRATOS

A little gem, cos type lettuce. Suitable for the fresh and processing market. It is produced in open fields. The variety has good head quality with excellent Bremia resistance and is suited to the fresh and processing market.

The variety is also known for earliness and high plant vigour and can be produced in winter and spring. The plant has a medium compact size with a dark green leaf colour.

DISEASE RESISTANCE

Hr: Bl: 16-28, 30-32
Ir: Lmv: 1

MERINOS

A little gem, cos type lettuce with smoother leaves than Extratos. Suitable for the fresh and processing market. It is suited for open field production. The variety has smooth leaf quality and has dark green colour. The variety is compact, vigorous and can be produced in winter and spring. The variety produces a constant shape plant.

DISEASE RESISTANCE

HR: BL: 16-35EU / Nr: 0 / TBSV

PIVOTAL

A midi cos lettuce for the winter segment. It is ideally suited to open field production and can be used for both the fresh and processing market segments. The variety has large diameter and dark green leaves. It is also known for its tolerance against bolting and tip burn. Pivotal experiences virtually no twisting during its growth cycle.

DISEASE RESISTANCE

Hr: BL: 16-29, 32, 34Eu / Fol:4

CLARAGIO

A red multi leaf Batavia ("one cut") type of lettuce. It is produced in the open field. The variety has excellent triple red colour and is suited to the fresh and processing market. The variety is also known for earliness and high bolting tolerance. It has a medium size frame.

DISEASE RESISTANCE

HR BL: 16-33, 35EU / Nr: 0 / FOL:4

MICHELAGIO

A green "one cut" type lettuce suitable for the fresh market and industry. It is produced in an open field ecology. The variety has a medium-large compactness that makes it suitable for the processing market. The variety has strong leaves with good size and shape. The leaf colour is dark to very dark green.

DISEASE RESISTANCE

HR: BL: 16-35 / Nr: 0/ TBSV
IR: LMV: 1

GLADIORE

An indoor segment butterhead lettuce suited for both the fresh and processing markets. This variety also thrives in the late autumn and early spring periods. The variety has a brilliant green colour, with compact head that is nicely filled possessing high internal quality.

DISEASE RESISTANCE

HR: BL: 16-32

METEORE

A medium sized butterhead lettuce suited for both the fresh and processing segment. Mainly produced in the open field in summer and under protection in winter. The variety has tolerance to frost that makes it suitable for winter growing. The variety has a medium dark green colour, with good volume and filling and a high quality presentation.

DISEASE RESISTANCE

HR: BL: 16-35EU

EL FUTURO

A slow growing variety suited for summer as it has very good heat resistance.

It has round, deep green leaves with a sweet taste suited for the fresh market. It is also suited to the processing market due to its suitability for harvest in long days without fear of rapid rise.

DISEASE RESISTANCE

Pfs 1-9, 11-16

EL LUCIO

An early variety suited for spring and fall. It has round, dark green leaves with a sweet taste suited for the fresh market.

The leaves are thick and slightly blistered. It has high yield potential and is also ideal for young shoots.

DISEASE RESISTANCE

HR: Pfs: 1-7, 9-17 / Sb

IR: Pfs: 8

ABACUS

An early hybrid for production throughout the year.

Abacus is an early hybrid with medium strong vigour, medium tall sturdy plants which produce uniform, medium to dark green, round, and firm sprouts in a cylindrical setting.

The quality of the sprouts on the stem remains high during the harvesting period. Very uniform grading.

The strong bolting tolerance makes Abacus very suited for early sowing and plantings. Suitable for mechanical harvesting.

DISEASE RESISTANCE

HR: Foc: 1

MAXIMUS

A medium early hybrid for production throughout the year.

Maximus is the leading medium early hybrid with medium strong vigour and medium tall sturdy plants which produce dark green, round, firm sprouts in a cylindrical setting.

The quality of the sprouts on the stem remains high during the harvesting period, even under unfavourable conditions.

The strong bolting tolerance makes Maximus very suitable for early sowing and plantings. 52% of the sprouts are smaller than 30 mm in diameter. Suitable for mechanical harvesting.

DISEASE RESISTANCE

HR: Foc: 1

WINNETOU

A blue - green coloured, fine curled kale suitable for the fresh market.

Winnetou is a vigorous variety and ideally suited for open field production.

This variety has moderate vigour, good standing ability and excellent winter hardiness.

Winnetou is also known for its high quality fine curled leaves and high yield potential.

AFRODITE

A medium-dark green cylindrical hybrid traditional variety for open field cultivation. Vigorous, with medium-long internodes. Its high precocity yielding marketable fruits and its high productivity rate make it ideal for use in open fields with spring sowing that leads to excellent yields, even in a short growing cycle. Medium-dark green classic fruit, with a regular cylindrical shape, even when longer and larger than usual. Afrodite continues to be a variety that is highly appreciated by the food industries, due to its small flower scar, excellent post-harvest preservation times, resistance during transport and handling.

DISEASE RESISTANCE

IR: CMV / WMV / ZYMV

ATHOS

Dark green cylindrical hybrid.

Athos has a large medium-strong open bush growth. Dense medium foliage cover and upright growth habit.

Uniform cylindrical, high quality, straight fruit with a shiny dark-green fruit colour and low number of speckles.

Medium-short peduncle and small-neat blossom end scar.

High yield potential and good shelf life.

Improvement over Raven due to its virus and powdery mildew resistance.

DISEASE RESISTANCE

IR: CMV / WMV / ZYMV / Gc / Px

QUINE

Medium, dark green cylindrical fruit. Suited for local and export market.

Quine is a medium dark green variety, with a strong plant and erect leaves.

Good tolerance to virus diseases and powdery mildew means this is a very productive variety.

DISEASE RESISTANCE

IR: Gc / Px / CMV / WMV / ZYMV

STARSHIP

Dark green hybrid summer squash. Starship is a medium early, bright dark green, scallop summer squash hybrid for production under plastic and in the open field.

The medium vigorous plants have an open habit and produce tender, tasty, bright dark green fruits which are very well adapted for use in the baby vegetable segment.

When harvested young Starship will prove to be a prolific producer of small, flavoursome fruits which are easily picked due to its open plant habit.

SUNBURST

Bright yellow hybrid scallop summer squash.

Sunburst is a medium late, bright yellow, scallop summer squash for production under plastic and in the open field.

The medium vigorous plants have an open habit and produce tender, tasty, bright yellow scallop fruits on a green stem.

When harvested young Sunburst will prove to be a prolific producer of small, flavoursome fruits which are easily picked due to its open plant habit.

ADMIRAL

A blocky hybrid pepper turning yellow at maturity.

Admiral is a medium-late variety producing high quality blocky fruits. The medium-tall plants have good setting.

The blocky, mostly four-lobed fruits have thick walls and an excellent quality. The average fruit weight is approximately 225g.

Admiral is suited for culture under plastic and in the open field.

DISEASE RESISTANCE

HR: PVY: 0 / Tm: 0 / Xcv: 1, 2, 4, 5

BALTA

A blocky hybrid pepper turning red at maturity.

Balta is a strong, open growth habit plant with good foliage cover.

Continuous fruit setting and production. Uniform fruit size and shape.

Fruit is blocky, green to red with high quality.

Very large-sized fruit: 11x10 cm. Fruit mass: > 230 g. Thick fruit wall.

Balta is aimed at areas where virus pressure might be a problem and suited for culture under plastic.

DISEASE RESISTANCE

HR: PVY: 0, 1, 2 / Tm: 0

IR: CMV / Lt / TSWV: 0

CANNON

A blocky hybrid pepper turning red at maturity.

Cannon is a strong, open growth habit plant with medium foliage cover.

Productive, with excellent continuous fruit growth and minimum pruning needed.

The fruit of Cannon is uniform and has a blocky fruit shape.

Turns dark-green to red at maturity with excellent firmness and vine storage.

Medium-large sized fruit: 9-11 cm x 8.5-10 cm.

Fruit mass: 175-250g.

Mostly 3-4 lobed with very thick fruit walls.

DISEASE RESISTANCE

HR: PVY: 0, 1 / Tm: 0-2

COMPADRE (hot pepper)

A hot jalapeno pepper that is widely adaptable and cold tolerant with continuous setting of fruits throughout the growing season.

It is a hybrid variety suited to both fresh and processing markets.

Fruits are smooth and uniform with consistent quality.

High plant vigour.
Excellent fruit quality.
Good fruit setting.

DISEASE RESISTANCE

HR: TMW / Xcv: 2, 5

CRUSADER

A blocky hybrid pepper turning red at maturity.

Crusader has consistently delivered beautiful, high quality fruit for green and red harvests. This dark-green pepper has shown excellent adaptability.

It typically produces blocky, 4 lobed, large and extra-large sizes that hold their shape and firmness under a range of conditions.

With high resistance to bacterial leaf spot races 1-3, Crusader provides insurance against disease outbreaks.

DISEASE RESISTANCE

HR PVY: 0, 1, 2 / Tm: 0 / Xcv: 1-3

INDRA

Blocky F1 hybrid turning red at maturity. Indra is a medium-early, very productive variety with a concentrated harvest of shiny, high-quality, blocky fruits.

The fruits have a medium thick wall and hardly any shoulder.

The average fruit weight is 170-225g. Indra can be grown under cover and in the open field.

Worldwide this variety has proved its reliability.

DISEASE RESISTANCE

HR: PVY: 0 / TEV / Tm: 0 / TMV / ToMV

JUPITER

Blocky pepper turning red at maturity.

Jupiter is a medium-early, consistently high-yielding variety which produces large, very blocky fruits.

The fruits are predominantly 4 lobed and are well-covered by the medium strong plant.

The fruits have a medium thick wall.

The average fruit weight is 170-225g.

Jupiter is recommended for open field production and green picking.

DISEASE RESISTANCE

HR: Tm: 0 / TMV

LAFAYETTE

A blocky hybrid pepper turning yellow at maturity.

Lafayette is a medium-late variety producing high quality blocky fruits.

The medium-tall plants have a good setting. The blocky, mostly 4 lobed fruits are very uniform, have thick walls and an excellent quality at full maturity.

The average fruit weight is approximately between 210-230g.

Lafayette is suited for cultivating under plastic and in open fields.

This variety is aimed at areas where virus pressure might be a problem or where cultivating under plastic is required.

(US1-2) / Va: 0 / Vd: 0
IR: Pst / TYLCV / Mi / Ma / Mj

NEWTON

An indeterminate hybrid tomato for fresh market.

Newton is a relatively compact plant with short internodes. This means more trusses per stem by the time the crop is topped or reaches the trellising wire. Excellent fruit shelf life.

Newton has approximately 6-7 fruit per truss and should not need truss pruning. In open-field plantings of Newton it has potential for both large fruit and value pack-sized fruit from the same truss. Newton has the characteristic of maintaining a good fruit size late into the cropping cycle without any truss pruning.

CRISP DELIGHT

Crisp Delight is hybrid, triploid, crimson sweet type watermelon that produces fruit with extremely firm flesh for the fresh cut fruit processor. Flesh firmness has shown to be twice as firm as standard seedless watermelon. Fruit shape is oval with deep red flesh and clear definition between the rind and the flesh. In addition, it has a very small seed size.

The fresh cut fruit show minimal post-processing liquid loss as compared to fresh cut fruit from standard seedless varieties. Crisp Delight is broadly adaptable and performs well under a range of growing conditions.

DISEASE RESISTANCE

HR: Froc: 1

FARAO (Seeded)

Hybrid, elongated, Crimson Sweet type seeded watermelon. Farao is a high yielding, medium-early, elongated, Crimson Sweet F1 seeded watermelon. Strong plant vigour with a very good vine growth habit. Shown excellent uniformity and fruit set with high interior quality.

Produces large elongated blocky shaped fruits. Medium-green with broad, medium dark-green stripes.

Medium thickness but durable rind for long distance shipping. Characterized by flavourful, dark red flesh texture with high sugars and small brown seeds.

DISEASE RESISTANCE

Ir: Fon: 0, 1 / Co:1

PRECIOUS PETITE (Triplod)

A round Jubilee type personal size triploid watermelon that exhibits exceptional internal quality. The variety produces uniform fruits of 2-2.5 kg.

The variety has a high yield potential due to its excellent fruit set uniformity.

It is suitable for open field cultivation.

PRINCE (Seeded)

Hybrid Jubilee type seeded watermelon. Prince is a high yielding medium-early Jubilee F1 seeded watermelon with an excellent vigour. Medium-strong plant vigour with a very good vine growth habit. Shown excellent uniformity and fruit set with high fruit quality.

Produces medium-large blocky shaped fruits. Prince has a medium thick rind and dark skin with a dark Jubilee stripe.

Durable rind for long distance shipping. Characterised by flavourful, firm, deep red flesh texture with high sugars and medium black spotted seeds.

DISEASE RESISTANCE

IR: Co: 1 / Fon: 1

ATHENA

Hybrid Cantaloupe. Athena is an innovative early hybrid cantaloupe for production in the open field. The medium vigorous to strong plants produce high yields of high quality. The oval fruits with minor sutures and coarse netting weigh from 1.5-2.5 kg.

The firm orange flesh with crisp texture keeps its sweet flavour even after long-distance shipping or a few days at the produce stand.
